4 ways to get 2 kg broiler weight in 4 weeks

It is the desire of every broiler to attain a high broiler weight in the shortest time possible. There are management practices that can be done to achieve this.

Begin with good quality chicks obtained from a reputable supplier. Broilers are known to grow fast but within broilers, we have different breeds of broilers with some growing faster than the others. To attain growth faster, buy a fast growing breed of broilers from a reputable supplier.

Other management practices

Provide good housing to the birds. Ensure that the poultry house provides as much comfort to the birds as possible because inappropriate housing causes stress to the birds and this diverts energy from growth to managing stress.

Swiftly respond to any health concerns. It is unlikely that you will rear birds and they fail to get sick. Birds often fall sick and this retards their growth rate. To enable faster growth, ensure that the you respond swiftly to any health issue that arises.

Feed management. Ensure that you give the birds good quality feed and in the right amounts. Feeds contribute 70% of the budget in broilers and this signifies how important feed is in the success of a poultry project. In addition to feed, provide your birds with adequate clean cool drinking water and also give the birds organic growth boosters to boost their growth.
