

Benefits of installing nipple drinkers

Nipple drinker benefits

Nipple drinkers are easy to install and help birds to access water easily thus creating a stress-free environment. Additionally, they make it easy to serve water to birds and take less space thus accommodation for more chickens. Furthermore, they are durable since they are made of stainless steel which does not rust therefore reducing disease emergencies. Nipple drinkers also ease oral medication and vaccination since drugs are added at once into the tank.

Precaution measures

Using chicken nipple drinkers requires some precautionary measures to facilitate birds to easily access water. First, ensure to use clean water with enough pressure. Additionally, monitor water levels in the reservoir tank and always ensure correct nipple installation. Lastly, use the correct water pressure and clean water.
