Castor Oil Farming

Clear your land and plant the seeds 3 inches deep and 2 meters apart because they may grow up to a height of 3 meters hence giving it enough space. Castor seeds are in 4 different varieties which include impala, camesita pink and rose, red spire, and Gibson. This crop is most popular in India but also in Mozambique, South Africa, Malawi, Zimbabwe, and Zambia where it is produced for export. Castor seeds are always very light but their weight can be increased if it gets enough water. Castor seed contains ricin which is poisonous and can cause allergies with its pollen. varieties should be mixed so as to harvest at different times, where it is always harvested after 2 days when the stems dry and turn brown to avoid them from falling down.

Castor oil uses

They were used in ancient days in tombs and also for the skin, it can also be used as vegetable cooking oil, jewelry necklaces, and bracelets, for medicinal purposes like in healing of the skin, lubricants especially in jets, airplanes, and vehicle engines for it is highly resistant to heat hence it lubricates the engine longer and better. Also, it can be used for constipation but too much of it is harmful and industrial purposes like the manufacture of biodiesel. Castor oil is also a laxative and can be used to clear toxins and in massages.
