

Complete feeding guide to help broilers convert feeds into muscles and weight gain

Boosting feed conversion

Always, provide broilers with feeds, clean water, and light at all times from week 1 to week 3. Additionally, also from week 1 to week 3 prevent disease outbreaks. Furthermore, after week 3 you should reduce feeding hours to reduce stress however water should be there at all times and never starve broilers for more than 4 hours.

Organic supplements

Ensure adding 3g of garlic powder to every kilo of poultry feeds to boost feed conversion efficiency. Additionally, add either 3g of turmeric powder in each kilo of broiler feeds or 10g of pepper powder in each kilo of feeds. Furthermore, you can also add 20g of ginger powder to each kilo of feed. Alternatively, also, add 1 teaspoonful of apple cider vinegar to 3 liters of chicken drinking water to improve chicken gut health.
