Diarrhoea Organic treatment in Chicken

Causes and prevention

Diarrhoea in poultry is caused by a number of reasons and among these include, worm, bacteria, virus infestation, kidney damage and bad feeds. Additionally, Marek‘s and New castle also cause diarrhoea. To prevent diarrhoea on farm, install a footbath and change its water on a weekly basis. Also isolate new flock for 2 weeks and vaccinate chickens in time against diseases that cause diseases.

Diarrhea treatment

Always provide birds with clean good quality water containing vitamins and electrolytes. Always implement farm bio security measures at all times for example Install a footbath and change its water regularly.
