Feeding black jack to chickens to boost weight egg production and coccidiosis treatment

Blackjack benefits

Blackjack contains phytochemicals, this help to prevent, cure and eliminate coccidiosis in poultry. Furthermore, blackjack also helps to keep chickens healthy, and boosts production thus reducing on costs involved in buying chicken drugs. Additionally, blackjack powder also prevents and kills harmful bacteria thus decreasing mortality rates in poultry farming. Lastly, blackjack boosts growth performance in chickens due to disease prevention and the curative properties it contains.

Blackjack powder preparation

To prepare blackjack powder start by uprooting blackjack plants, thereafter cut off roots, and wash the plant well. Secondly, dry the plant properly and grind the dried plant into powder, thereafter preparation add 0.5% of the blackjack powder per kilogram of chicken feeds.
