Gloria F1 Cabbage performance Review

One of the best and superior cabbage variety is the gloria f1. Before planting make sure to inspect the market to get the needs of the customer. Most markets are in need of big cabbages ir-regardless of the variety..

Gloria f1 variety weighs between 3-6kg if well fed with a maturity period of 70-90days depending on the weather, it has good foliage and is tolerant to fungal diseases. it is highly tolerant to diseases like black rot which is very common, especially in cold places. It is also tolerant to fungal diseases like stem rot. It is highly recommended for it gives a head, size and weight of a big cabbage. Gloria f1 variety is a heavy feeder hence it should be well fed and watered to get the best produce. No plant is tolerant to pest hence the should be controlled well especially aphids. Failure to manage it well leads to small head or failure to form.
