

How to build a vegetable garden

Vegetable are important crops for a healthy diet however vegetable gardens should be put in sunny places away from big trees and bushes to reduce nutrient competition.

When preparing vegetable garden do not use tiller as it breaks the grass which later grow into numerous plants difficult to remove. Vegetable soil should be 1 – 2 feet thicker therefore the longer you grow vegetables the thicker the good quality garden.

Steps

Shovel grass, turn soil and remove grass and roots.

Separate grass from soil with a rake

Build garden edges with bearing blocks to separate garden from grass and roots.

Raise garden bags for water not to flow in the garden.

Apply top organic soil 1 foot thick for organic farmers.

Evenly apply and turn organic matter, mulch and compost in soil for further soil decomposition.
