

How to Harvest Honey

Honey harvesting

First, fill smoker with non toxic smoke materials and smoke at the beehive entrance, thereafter, use a knife to open hive so as to reach honey. Furthermore, place extracted honey combs in clean containers to avoid contamination and ensure to smoke bees when extracting the honey combs from the hive. Lastly, gently place back the comb flames into the hive without damaging bees and cover the top after harvesting.

Honey extraction

After harvesting honey, smash the harvested honey combs in a clean container or bucket. Additionally, filter the smashed honey combs with a fine sieve to separate honey from the wax. Lastly pack the filtered honey into clean containers of desired sizes for marketing.
