How To Plant Tomatoes

Tomato management

First, put stakes at 1m apart on the bed before planting tomatoes to allow a lot of air movement and plant basal plants around stakes. Dig a deep hole, place tomato seedling in it and cover upto first bottom leaf and add rock dust with sea weed fertilizer to the plant and stake in a few weeks. Similarly, dont remove bottom leaes from the seedling as it encourages rotting and also encourage infectioens to th plant. Finally, sprinkle calcium around tomato plants.
