How to prepare for Green Capsicum/Sweet pepper farming

Capsicum or green capsicum is mostly done in open field. Before starting planting green capsicum always make sure to check on the market pricing and trend.

Harvesting

When taken care of well capsicum can be harvested for a period of 3- 5months. After checking and identifying that the market is good check the pathology of the soil as well as the nutrition, check of the varieties you want to grow for example the hybrid variety, F1 variety , OPV variety or the GMO. Land ploughing should be deep to make sure the soil is turned upside down. Make furrows of about one meter apart and make sure they are evenly distributed. Block the furrows for good water holding basin for good planting and good farming.
