How To Sow Leeks and Storage Onions, and Tomato Problems

Crops management

First, a farmer should sow thw seeds in 2-3 weeks, cover after sowing and dip the trays of seeds in water for 20 minutes for the soils to wet longer. Add sea weed solution to the mix for seeds to get better germination and remove the tray from water after water absorption and cover to protect seeds from hard sun, keep soil moist and also keep good humidity.
Similarly, Water at least once or twice a day and cover watering. Although onion types include summer and spring onions, prevent the pests and diseases in the garden.
Plant beneficial flowers around the garden and finally water soil regularly.
