

How to tell when a female goat is in heat

Being a good investment to venture in, the quality and quantity of goats products is determined by the type and level of technology during production.

A doe stay on standing heat for 24 hours ready to be mounted by the buck for conception and this is identified by heat signs. A doe starts wagging its tail and vulva becomes swollen and mucus is secreted from it.

Heat signs

As a doe mounts other goats a buck becomes aggressive due to the smell produced by the doe and it starts bellowing. Finally, the gestation period of a goat is 150 days or 5 months.
