# Increasing chickens growth rate and egg production using with carrot juice supplement

## Juice preparation

Start by washing carrots, chop them into 1-2 cm sizes, and thereafter bled them into juice. This should be followed by mixing 100 MLS of carrot juice per 100 grams of flour, you can use maize or wheat flour. Additionally, dry the mixture and add the dried ingredients to feeds during formulation at a rate of 10 grams of carrot powder for every kilo of feeds.

## Carrot meal benefits

Carrot meal benefits is highly beneficial when added to chicken feeds, it helps in the development of villi hence facilitating the absorption of feeds as well as promoting growth, weight gain, and growth. Additionally, carrot meal also boosts immunity, acts as an oxidant for better health, and also increases egg production.
