Learn how To Make Organic Pesticides

Material preparation process

For 5 litre pesticide break and pound a handful of garlic and 2 handful of ginger separately, measure 1/4 litre of water and add to both crushed garlic and ginger, stir and store them separately in a coll dry place to facilitate decomposition. Additionally, cut and pound 6 lemons, 1 handful of chilli and full bucket of pawpaw leaves. Furthermore, pound full container of neem, pumpkin leaves and half a container of marigold leaves.

Mixing pesticide

After 1 week, mix all ingredients, add 1 full plate of ash, mix well and keep for 1 week. Thereafter sieve the content two times and after 1 week and add 1/2 litre of animal urine. Lastly, after preparation pack the prepared organic pesticide, add some water and distribute to markets.
