Lemon supplement to boost chick growth, treat sick hens and increase egg production

Lemon benefits

Lemon helps to treat infections in birds, especially E. coli bacteria. Additionally, lemon also promotes weight gain as well as protein digestion. Furthermore, lemon increases feed intake, feed efficiency, and absorption thus improving chicken health and growth rate. Lastly lemon contains prebiotics which enhance health as well as remove harmful chemicals from the chicken body.

Preparation procedure

For proper preparation, first, cut the lemon, thereafter squeeze out the juice and then filter out the seeds. Furthermore, add to feeds the squeezed lemon juice into chicken feeds at a ratio of 20 MLS of lemon juice per kilogram of feeds and mix well before feeding the birds.
