Natural organic treat for all coughs and respiratory illnesses in chicken

Signs and symptoms

Affected birds show signs and symptoms including sneezing, coughing, watery eyes, eye swelling, and labored breathing. Other signs include pale combs and wattle, lack of appetite, and general body weakness. Therefore it is always important to isolate sick birds from healthy ones for proper monitoring, treatment, and recovery.

Organic treatments

Start by mixing equal amounts of turmeric, and pepper powder. Thereafter add 1 teaspoon of the mixture per 3 liters of chicken drinking water and give this to birds 2 times a week. Alternatively, you can also crush garlic cloves and add them to chicken drinking water. Furthermore, you can also add coconut oil to chicken drinking water or give coconut oil directly to severely affected birds.
