

Natural treatment for colibacillosis in chicken

Disease causes

Colibacillosis disease is very devastating and can kill the entire flock at its early stages. The colibacillosis poultry disease is caused by E. coli bacteria and originates from both hatcheries and affected previous flocks. Additionally, stress among birds and stressful conditions also cause colibacillosis in poultry.

Precautions and treatment

Always eliminate stress and source good quality chicks from reputable hatcheries. Furthermore, ensure to change litter frequently and isolate new flocks from the existing flock. On the other hand, for effective organic colibacillosis treatment start by adding both thyme and turmeric extract in chicken feeds and water. Alternatively, add garlic powder as well as essential oils in both chicken feeds and drinking water respectively.
