

The 'step by step' of how to grow hydroponic barley/wheat fodder in Africa

Crop management

First, moisten seeds every 12 hours during the first 48 hours and the seeds germinate 2 days after soaking. After incubation of 48 hours, transfer seeds to the aluminium tray and spread evenly and place the tray on slope with perforated end of it on lower side of slope.

Similarly, water barley at least 3 times a day and harvest the fodder on day 4 for poultry, day 6 for pigs and rabbits and day 8 for goats, cows and sheep.
